

Ideas Heat map of tennis Venues.

Filter

Tree Map and Pie chart

* Shows similar data
So only one is necessary.

* Pie may be favourable due as we are comparing simple proportions.

Categorise

Multi-line chart

* May be a bit misleading.

* Data may be understood better as a stacked or connected bar chart.

General Chart Flow

Combine & Refine

Bar Chart

* Bars can be stacked, allow for more than one year to be displayed.

* Year slider can be removed if bars are stacked.

Map Chart

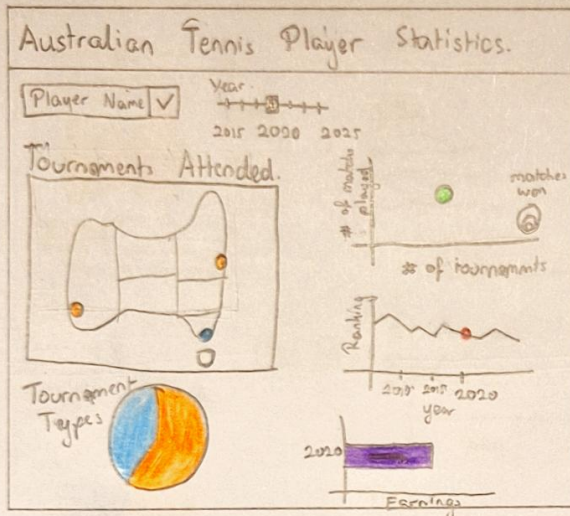

* If chart is for venues only, circle markers could be used instead of the heat map.

* Coloured circles could indicate type of venue or surface type.

Summarise and question

* Are there more complex charts that could fit this domain?

* What other data points could be included?

Components / Operations

Slider to show players stats during given year within Australian based tournaments.

2015 2020 2025

Parti / Focus

Aims to show the states of the ten most popular Australian Professional Tennis players.

Map will aim to show where they played during a given year.

Pro & Cons

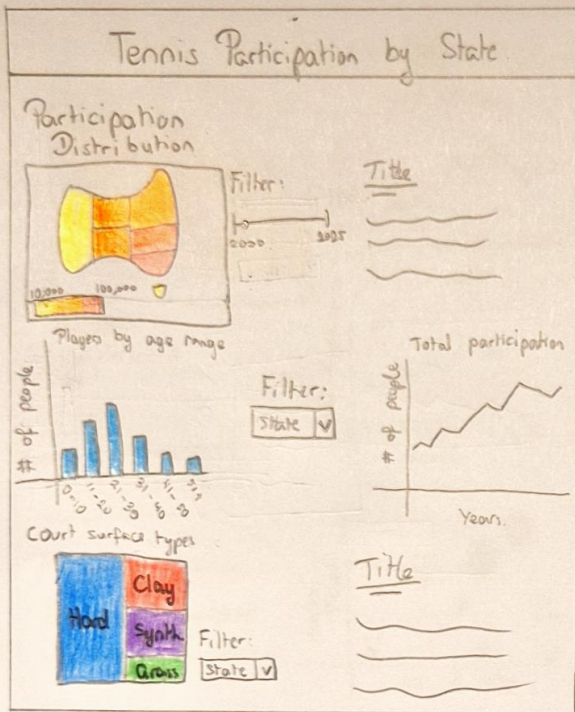

Pros

Easy to interpret and interact with.

Cons

Unable to easily compare two players.

May be difficult to filter all charts together in Vega-lite.

Part / Focus

★ No real focus here, however the map is kind of independent to the other three charts, which aim to show the different stats for the selected state.

Sheet 2(3)4

Name

Date

Title State Engagement / Participation

Description

Components / Operations

★ On state click, other states will be blacked out and will focus on the selected state.

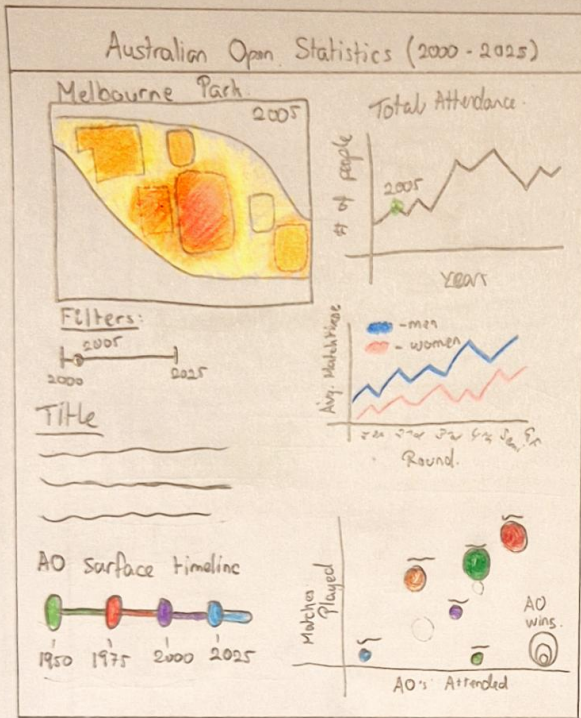

Pro & Cons

Pros

★ Added text beside/near charts can add extra clarity to charts.

Cons

★ May be too few charts.
★ Multiple 'Filter' dropdowns may be too confusing.

Part / Focus

- * Aims to highlight the growth of Australian open and its players.
- * Heat map aims to show how the concentration of attendees may have shifted as time and Melbourne park has changed.

Sheet 2,3(4)

Name

Date

Title Australian Open Stats.

Description

Components / Operations

- * Time slider to adjust the heat map, and focus an annotation on the total attendance.

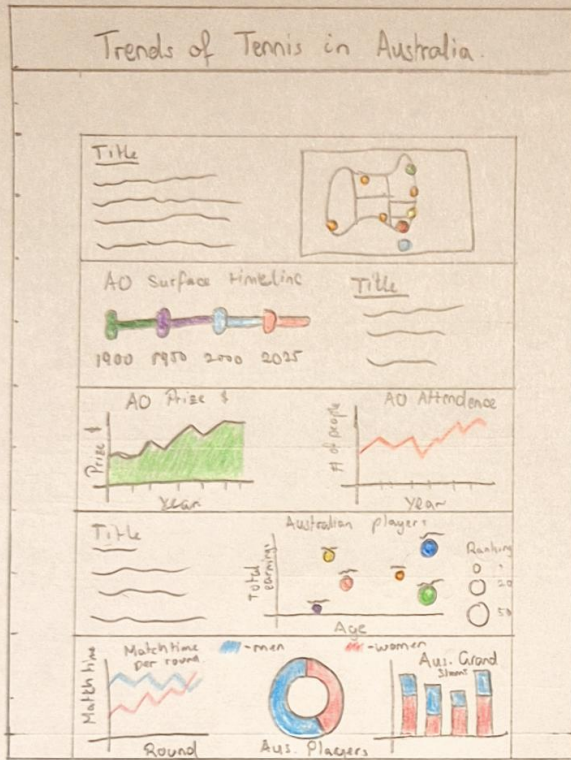

Pro & Cons

Pros

- * Fewer interactions leading to less confusion.

Cons

- * Heat map of Melbourne Park may be difficult to obtain data for.
- * Two line charts may be a waste of a chart.

Components / Operations

Tool tips

★ Will present a detailed overview of each data point for each chart.

Text beside charts

★ These aim to give further clarity and insight to what is shown in the charts beside it..

Part / Focus

★ No main focus as the user will scroll through the visualisation to see each chart.

★ First four charts aim to show the growth trends of the sport, while the latter half of the visualisation shows distributions and stats of Australian Players.

Details

Collecting player stats from Tennis Australia Annual Reports, ATP/WTA archives, Australian Open Stats:

→ 2 days for collating and converting to usable csv.

Collecting Venue data such as coords and surface types from open geospatial databases, Austadiums, Tennis Australia Venue directory:

→ 2 days to create csv.

Cooling in vega-like

→ 1 days for 2 charts (~ 4 days)
